

Creating Virtual Machines

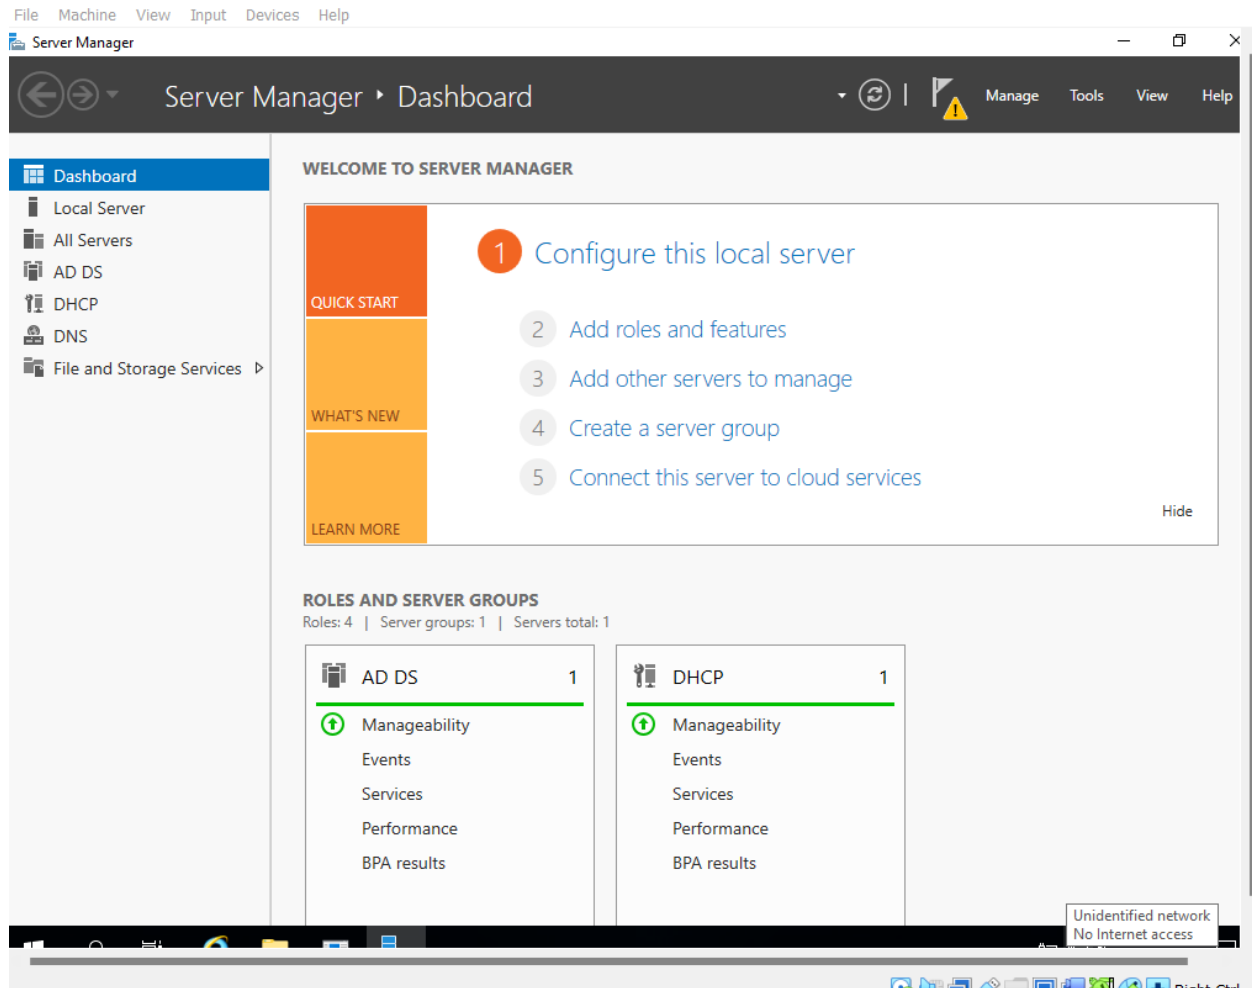

Disclaimer: these notes are for studying purposes as a security specialist. As security specialist we have to do everything in an ethical and proper manner.

This course requires from us to install the following virtual machines:

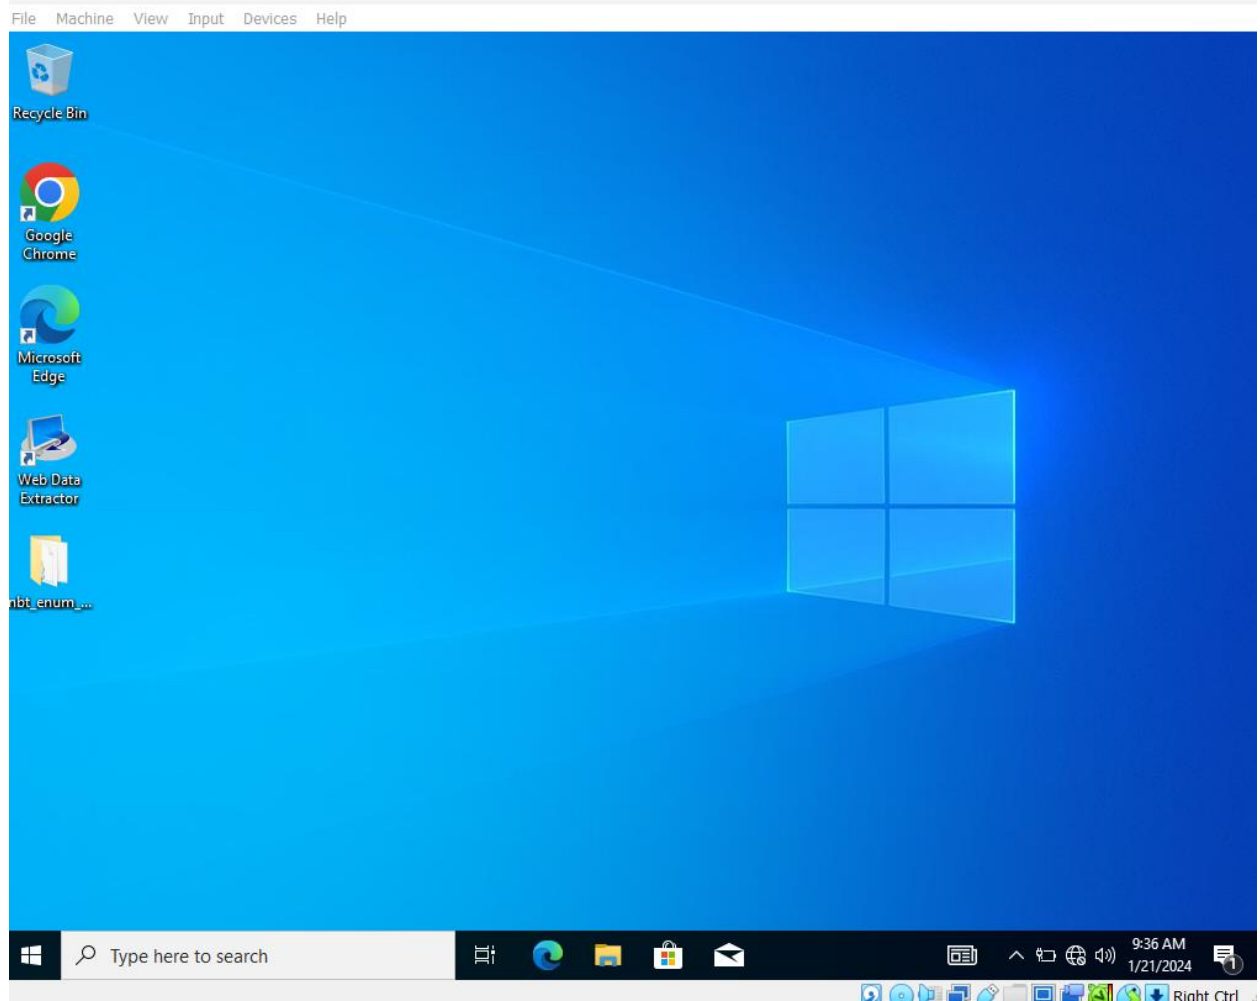

1. **Kali Linux**: contains a lot of tools that ethical hackers can use.

2. **Windows Server 2019**: to create servers and domain.

3. **Windows 10:** To make it join the domain. And m

4. Metasploit CLI
